# 1<sup>st</sup> quarter summary

## THE ECONOMIC CLIMATE

- Developed economies continued to experience steady, moderate expansion with fourth quarter real GDP growth in the U.S., the Eurozone, and Japan all between 1.5-2.0%. The base effect of lower oil prices led to higher year-over-year headline inflation in many countries. **p. 16**
- During the first quarter, the global economy exhibited a coordinated pick up in economic activity. Data generally exceeded expectations, especially in the U.S. and the Eurozone. **p. 18**

## MARKET PORTFOLIO IMPACTS

- The U.S. Treasury curve flattened in the first quarter. Short-term rates were driven higher by the Fed, while the long end of the curve remained unchanged. Even with Fed tightening, the U.S. may not be in a typical rising rate environment. **p. 22**
- A better outlook for commodity performance, as well as a flattening of the futures curve in some markets increases the attractiveness of commodities as an inflation hedge. **p. 38**

## THE INVESTMENT CLIMATE

- While central banks are still accommodative outside of the U.S., most appear to be in later stages of the easing cycle. Developed central banks appear to be broadly entering a period of policy normalization. **p. 22**
- The market is expecting better earnings growth in U.S. equities. According to FactSet, the estimated Q1 earnings growth for the S&P 500 is 9.2% from the previous year. Higher earnings growth may help justify above average valuations. **p. 29**

## ASSET ALLOCATION ISSUES

- Stabilizing currencies and commodity prices, as well as higher growth outlooks, may benefit emerging market equities. **p. 33**
- With U.S. Treasury yields still at historic lows and the expectation of additional tightening from the Fed, investors may not be adequately compensated for taking duration risk in the current environment. **p.23**

We continue  
to be neutral  
towards risk

# What drove the market in Q1?

# Economic environment

# U.S. economics summary

- U.S. real GDP grew 2.0% YoY in Q4, up from 1.7% in Q3. Moderate increases in consumer spending continued to be the main driver of the economy.
- Inflation moved higher as headline CPI increased 2.8% YoY in February. Core inflation, however, increased only modestly to 2.2%. Most of the rise was caused by the low base effect from falling oil prices last year.
- The Fed continued tighter monetary policy by raising the target federal funds rate 25 bps to 0.75-1.00% at its March meeting. The FOMC dot plot indicates two more rate hikes in 2017, while the market has only priced in one more increase.
- The March Fed meeting minutes revealed that the central bank may begin shrinking its balance sheet as early as December, representing a form of monetary tightening. It remains unclear whether the Fed will stop rolling over maturing securities or actively sell in the open market.
- On average, 178,000 jobs were added each month during Q1, and unemployment fell 0.2% to 4.5%. Data continued to indicate a tighter labor market, though wage growth is lackluster. Real hourly earnings fell 0.1% in February from the prior year.
- Soft data (consumer & business sentiment) improved markedly following the U.S. presidential election. We are continuing to monitor the degree to which soft data flows through to actual spending and investment patterns. At this point evidence still is lacking.

# U.S. economics – GDP growth

Real GDP grew 2.0% YoY in Q4 (2.1% quarterly annualized rate) as slow but positive economic growth continued.

Personal consumption contributed 2.4% to quarterly GDP growth, and was once again the main driver of improvement in the economy. Rising post-election consumer confidence did not immediately flow through to the real economy, but may support increased spending in coming quarters.

Private domestic investment also contributed to growth. A widening trade deficit from both an increase in imports and a decrease in exports was the largest detractor from GDP growth.

The Atlanta Fed GDP Now forecast for Q1 was 0.5% as of April 14<sup>th</sup>. The forecast was revised downward throughout the quarter mainly due to softer personal spending data. Part of this weakness can be attributed to a temporary decline in utilities spending from milder winter weather.

The U.S. economy continued to grow at a moderate pace

## U.S. REAL GDP GROWTH

Source: FRED, as of 12/31/16

## U.S. GDP COMPONENTS

Source: BEA, annualized quarterly rate, as of 12/31/16

# U.S. economics – Labor market

Moderate additions to payrolls and higher employment indicate a tighter labor market. Job gains averaged 178,000 per month in the first quarter, slightly below the expansion average of 199,000. The headline unemployment rate fell to a nearly decade low of 4.5%. The broader U-6 unemployment rate, which includes discouraged workers who want a job but have given up looking, and part-time workers who would like to be full-time, fell to a cyclical low of 8.9%. The participation rate rose to 63.0%, an increase of 0.3%.

The number of job openings in the economy is relatively high, likely due to a lack of supply. Companies are having a difficult time finding qualified workers to fill open positions. While most employment data suggests a tight labor market, wage growth has been unusually muted throughout this cycle. As the U.S. economic expansion ages, we would expect companies to raise wages in order to attract and retain workers. However, real average hourly earnings fell 0.1% in February YoY.

Source: FRED, as of 2/28/17

# A closer look at participation

The labor force participation rate has fallen significantly following the financial crisis. While most of the drop can be attributed to an aging population, one-third is a result of structural issues, and possibly some remaining cyclical factors. Stripping out the aging effect by looking at the core working age group shows a drop of 1.9% in participation over the past 10 years.

Unlike cyclical factors that move with the economic cycle, structural issues in the labor market may be more or less permanent. This is important because fewer workers participating in the economy will result in slower growth,

all else equal. Workers reentering the economy, however, could provide some protection against rapid wage price inflation, and therefore mitigate the risk that rapid wage inflation disrupts economic growth.

Structural issues that may explain lower participation include an increased number of unqualified workers due to a lack of requisite skills and education and those with criminal felony convictions. There may also be fewer incentives for people outside of the workforce to return because of slow wage growth and a greater reliance on permanent federal disability.

**CORE AGE GROUP (25-54) PARTICIPATION**

Source: BLS, as of 1/31/17

# U.S. economics – The consumer

Higher interest rates are expected to be a headwind for U.S. consumers, but other fundamentals reflect a positive overall environment. Much of the economic growth in the current cycle has been attributed to moderate, steady increases in consumer spending. In February, consumer spending grew 1.7% from the previous year. While positive spending growth has been consistent, there has yet to be a material flow through effect from the jump in confidence following the U.S. election in November.

An increase in financial assets during the current recovery has led to large gains in household net worth. The wealth effect, in which consumers increase spending habits based on a higher level of perceived wealth could have a positive impact on economic growth.

Although the consumer has led the economic expansion, credit has not been used as much as in previous cycles. Consumer credit growth has been moderate and household balance sheets remain relatively healthy.

Steady increases in consumer spending has driven recent growth

HOUSEHOLD NET WORTH

Source: FRED, as of 1/31/17

CONSUMER CREDIT GROWTH

Source: FRED, as of 1/31/17

# U.S. economics – Sentiment

Consumer sentiment fell slightly over the quarter, but the overall level remains high. The University of Michigan Consumer Sentiment Index was 96.9 at the end of March, compared to the long-term average of 85.6. Consumers cited three key components for the greater optimism: higher incomes, favorable job prospects, and low inflation expectations. Consumer sentiment and hard data do not always align as sentiment builds and falls more slowly through time.

The University of Michigan survey also identified a disconnect in consumer sentiment across political party

affiliations. Democrats expect an immediate recession, while Republicans expect robust economic growth. The index of consumer expectations was 50.5 points higher for Republicans than Democrats. Continued political uncertainty could weigh on sentiment in the coming months.

U.S. economic data has exceeded expectations - a trend that started prior to the election. The Citi Economic Surprise Index was 48 at quarter-end, its highest level in more than three years. However, much of the uptick in this indicator has been driven by “soft” data that has yet to flow through to the real economy.

Overall, consumers remain optimistic about the economy

U.S. ECONOMIC SURPRISE

Source: Bloomberg, as of 3/31/17 (see Appendix)

# U.S. economics – Housing

Despite higher mortgage rates since November, home prices in the U.S. have moved upward. Over the 12 months ending in January, the Case-Shiller National Home Price Index rose 5.8%. This price gauge has rallied 37.7% since bottoming in January of 2012 and is now slightly higher than the previous peak.

While increases in interest rates may act as a headwind, the housing market is supported by strong demand for single-family homes and historically low supply,

in addition to an overall financially healthy consumer base. At the current rate of sales it would take only 5.4 months to completely sell the entire supply of homes.

Housing starts and building permits have been steadily trending upwards with homebuilders ramping up construction to meet outsized market demand. New homes coming on line may put downward pressure on prices.

**MONTHLY SUPPLY OF HOMES**

Source: FRED, as of 2/28/17

**HOUSING STARTS AND PERMITS**

Source: FRED, as of 2/28/17

# U.S. economics – Inflation

Headline CPI rose 2.8% in February from the previous year, its highest rate in five years. Much of this jump in inflation can be attributed to the base effect of low oil prices one year ago. The energy component of the CPI basket increased 15.6%. Core inflation remained unchanged at 2.2%.

After rising considerably following the presidential election, market inflation expectations were mostly unchanged during the first quarter. The 10-year TIPS

breakeven inflation rate finished the period at 2.0%. The market continues to discount low levels of future inflation relative to history. In comparison, consumers are expecting 2.5% annualized inflation over the next 5-10 years, according to the University of Michigan survey.

Our view remains that the market may be underpricing expected inflation at a time when inflation risks are skewed to the upside.

# An update on political policies

| POLICY AREA           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Taxes</b>          | <ul style="list-style-type: none"> <li>— Much of the optimism surrounding Trump's victory in November was based on his promise to cut taxes for individuals and businesses.</li> <li>— President Trump has stated that he wants to find a solution to repealing and replacing the Affordable Healthcare Act (ACA) prior to working on tax reforms. No further details have been released.</li> <li>— The tentative deadline for the tax plan was originally set for August by Treasury Secretary Mnuchin, but it appears this may be pushed back further, and the actual timing remains unknown.</li> </ul>                                                                                             |
| <b>Trade</b>          | <ul style="list-style-type: none"> <li>— In one of his first acts as president, Donald Trump delivered on a campaign promise and removed the U.S. from the Trans Pacific Partnership (TPP) in an effort to move away from multilateral trade agreements.</li> <li>— After making many other "America first" trade policy promises, including withdrawing from NAFTA and implementing a border adjustment tax (BAT), the new administration appears to have softened its stance.</li> <li>— Rather than a complete overhaul of U.S. trade policy, it may be more likely that President Trump makes smaller tweaks, such as renegotiating and stepping up enforcement of existing trade deals.</li> </ul> |
| <b>Deregulation</b>   | <ul style="list-style-type: none"> <li>— President Trump signed an executive order to reduce the regulatory burden on businesses by requiring federal regulators to kill two existing regulations for every new rule introduced.</li> <li>— In perhaps the biggest blow to the administration thus far, House Republican leaders pulled legislation to repeal parts of the ACA before a single vote was cast, exposing a divided Republican Congress.</li> <li>— House Republicans announced a plan to introduce legislation that would overhaul Dodd Frank, although opposition from Senate Democrats is expected to be strong.</li> </ul>                                                             |
| <b>Infrastructure</b> | <ul style="list-style-type: none"> <li>— Infrastructure is another area in which President Trump has not provided much in terms of additional details after promising a \$1 trillion dollar spending initiative through private tax breaks during his campaign.</li> <li>— With the current focus on healthcare, and the lack of progress on tax reform, it is possible that the new administration may push back the timeline for introducing its infrastructure plan.</li> </ul>                                                                                                                                                                                                                      |

# International economics summary

- Developed countries once again experienced moderate positive growth in the fourth quarter, in line with the trend of recent years. Real GDP in the U.S., Europe, and Japan grew between 1.5-2.0%.
- The low base effect of the drop in energy prices that occurred in Q1 2016 helped boost inflation across the globe. With energy prices stabilizing over recent months, it is possible the jump in inflation is only transitory.
- Developed world unemployment rates declined over the quarter. In the Euro Area, the unemployment rate fell to a nearly eight year low of 9.5%, although this is still well above its pre-crisis level of 7.3%.
- The economic recovery in Europe has also picked up in terms of higher growth and inflation. Much of this recovery can be attributed to the core countries, rather than the periphery. However, significant tail risks remain including the French election, ECB tapering, and Brexit negotiations.
- On March 29<sup>th</sup>, the British Prime Minister, Theresa May, filed the official papers to withdraw the U.K. from the European Union. Article 50 of the Treaty of Lisbon outlines a two year timeframe for negotiations to take place.
- As many expected, Emmanuel Macron and Marine Le Pen were the top two vote getters in the first round of the French election. Macron and Le Pen will have a runoff vote on May 7<sup>th</sup>, where Macron is heavily favored, according to the most recent polls. Equity markets reacted positively to the results and the euro strengthened.

# International economics

A coordinated uptick in global economic sentiment occurred in recent quarters, and data continued to exceed expectations in Q1. Outside of the U.S., central banks remain relatively accommodative, and developed economies have experienced moderate growth and higher inflation. Real year-over-year GDP growth in the Euro Area and Japan came in at 1.8% and 1.6%, respectively.

In the Eurozone, headline CPI in February reached 2.0% YoY for the first time in the recovery. However, core

inflation, which excludes food and energy prices, only rose 0.7%, well below the ECB's target of 2.0%. A weaker British pound helped boost U.K. headline inflation to 2.3% in February, the highest rate in more than three years.

Real GDP growth in the BRICS countries, the five major emerging economies, was 5.2% in the fourth quarter. Once again, India and China were the main drivers of growth. Russia experienced positive growth for the first time in seven quarters, while Brazil remained in a recession.

# Global economic pickup

There has been a general pick up in global economic conditions over the past six months, a trend that started prior to the U.S. presidential election. Purchasing managers' indexes (PMI), which are derived from monthly surveys of private companies, have increased across nearly all major economies. The global composite PMI increased from 51.7 in September to 53.8 in March. Readings above 50 indicate economic expansion and have historically held some explanatory power of future economic growth.

Global economic data has also been coming in above expectations, as indicated by the Citi Economic Surprise Index (CESI). The Global CESI increased to 38.8 in March from -2.6 six months earlier. However, much of this move has been driven by "soft" data, such as sentiment and confidence indicators, which have not always flowed through to the real economy. If higher sentiment and confidence does lead to increased spending and production, it will be a boost to economic growth.

# The European election cascade

Following the U.K.'s decision last June to leave the European Union, the rise in populism in Europe and corresponding political risks to the currency bloc have been heavily scrutinized. While the upcoming French presidential election has dominated the headlines, several other important elections coming up will help shape the future of Europe.

The presidential election in France may pose the largest political risk to the region. Far-right, euroskeptic candidate, Marine Le Pen, has gained popularity running on the platform to remove France from the European Union and the use of the euro. Le Pen and centrist

candidate, Emmanuel Macron, were the top two vote getters in the first round of the election and will go head to head on May 7<sup>th</sup>. Macron is favored in the polls and market fears of a Frexit have subsided.

However, the threat of populism in Europe remains. Other elections, such as the German federal election in September and the Italian general election in early 2018 at the latest, will also be important as populist parties have gained popularity in countries across Europe. Additional risks loom in periphery countries like the Czech Republic, as debates heat up regarding EU membership referendums.

# Fixed income rates & credit

# Interest rate environment

- U.S. Treasuries have an attractive yield relative to other developed sovereign bonds, but remain historically expensive.
- Despite broad agreement that the U.S. has entered an environment of rising interest rates, the broad yield curve rose very little over the past year. However, the short end of the curve has increased in line with Federal Reserve rate rises. Inflation has historically had a significant impact on the yield curve, which indicates investors should keep an eye on inflation trends.
- In March, the Federal Reserve announced a change to the federal funds target rate from 0.50-0.75% to 0.75-1.00%. The move resulted in the U.S. Treasury curve flattening moderately as short-term interest rates increased and long-term rates remained materially unchanged. The Fed has indicated two additional rate hikes are expected to occur this year.
- Developed sovereign yields are expected to rise only modestly over the next year, with very little movement expected in longer dated bonds. Central banks of most developed economies are nearing the end of the monetary easing cycle or have begun to pull back, as in the case of the U.S. Federal Reserve.
- Many emerging market governments continue with monetary easing, suggesting these economies may be in an earlier stage of the economic cycle.

| Area          | Short Term (3M) | 10 Year |
|---------------|-----------------|---------|
| United States | 0.75%           | 2.39%   |
| Germany       | (0.92%)         | 0.33%   |
| France        | (0.57%)         | 0.97%   |
| Spain         | (0.39%)         | 1.65%   |
| Italy         | (0.34%)         | 2.31%   |
| Greece        | 2.39%           | 6.90%   |
| U.K.          | 0.13%           | 1.14%   |
| Japan         | (0.20%)         | 0.07%   |
| Australia     | 1.59%           | 2.70%   |
| China         | 2.93%           | 3.28%   |
| Brazil        | 10.91%          | 10.06%  |
| Russia        | 9.50%           | 7.87%   |

Source: Bloomberg, as of 3/31/17

# Monetary tightening

- The Federal Reserve hiked interest rates for the second time in March, raising the federal funds target to 0.75-1.00%. Given the increased pace of tightening and more hawkish tone from the Fed, there has been much discussion regarding the effects of a rising rate environment in the U.S.
- While the Fed expects short-term rates to normalize to 3% by 2019, the market is pricing in movement to only 1.8%. The market also does not expect much change in the long-end of the curve with the 10-year Treasury yield priced to rise only 26 bps over the next year. We believe that the market view of the path of interest rates is reasonable, and that there is a greater likelihood of surprisingly slow, rather than surprisingly fast, rate rises.
- Another unknown aspect of monetary policy relates to the Fed's \$4.5 trillion balance sheet. In the most recent meeting minutes it was noted that an unwinding of the balance sheet may begin at the end of the year. It remains unclear whether the Fed will simply stop reinvesting securities or actively sell in the market. A sale would be the more aggressive option, but either action would equate to monetary tightening, which may slow the expected pace of federal fund rate hikes.

# Yield environment

U.S. YIELD CURVE

GLOBAL GOVERNMENT YIELD CURVES

Global investors continue to prefer U.S. Treasuries due to higher relative yields

YIELD CURVE CHANGES OVER LAST FIVE YEARS

IMPLIED CHANGES OVER NEXT YEAR

Source: Bloomberg, as of 3/31/17

# Credit environment

U.S. high yield option-adjusted spreads compressed slightly during the first quarter to 3.9% and the asset class generated a 2.7% return (BBgBarc U.S. Corp. High Yield Index). High yield spreads are now tighter than those of bank loans on a duration neutral basis, despite being of generally lower credit quality and higher in the capital structure. Bank loans may provide a better risk-return tradeoff in the current environment.

Upbeat consumer sentiment, stronger labor markets, and a generally brighter picture for the U.S. economy all bode well for credit markets. Although spreads have tightened

to levels consistent with a mid-to-later stage economic cycle, no overheating or obvious threats to the credit markets seem apparent.

The Federal Reserve voted to increase interest rates by 0.25% in March. The speed of rate rises has underwhelmed the market for some time, and the market is expecting this slow pace to continue. Investors may be well served by limiting duration risk, though the probability of a sharp bond selloff (quickly rising rates) seems low.

# Issuance and default

Both U.S. senior loan and high yield markets continue to stabilize with the majority of par defaults last year coming from energy and metals/mining sectors. Rolling default rates should fall as commodity prices continue to recover and commodity price-induced credit problems have less impact on the credit universe. Active management may offer value to investors in the high yield space.

Global high yield and bank loan issuance has continued at a similar pace to what was seen last year. Lower spread levels lessen the borrowing costs for these issuers. The direction of interest rates will likely impact issuance trends in the near future.

The effect of commodity related defaults should subside

# Equity

# Equity environment

— The U.S. economic environment has shifted in a materially more positive direction, post-election. This move was reflected in an upward adjustment to equity prices. We are relatively bullish on U.S. earnings growth in the near term, but remain concerned that investors are paying for this excess growth upfront through higher valuations. We maintain a neutral weight to U.S. equities.

— According to FactSet, the estimated Q1 2017 earnings growth rate of the S&P 500 was 9.2% YoY. The estimate was revised downward from 12.5% on December 31st due to negative EPS guidance in the Materials and Consumer Discretionary sectors.

— Growth equities outperformed value equities in Q1. The Russell

1000 Growth Index and Russell 1000 Value Index returned 8.9% and 3.3%, respectively.

— The U.S. dollar fell 3.6% in Q1 on a trade-weighted basis, which has affected the returns of portfolios with unhedged currency exposure.

— As discussed recently in our *Sound Thinking* research piece, investors should be mindful of their biases in portfolio construction. One particularly prevalent bias is the tendency for investors to hold greater exposure to the markets where they reside (home country bias). As with any portfolio tilt, investors should understand why they hold it, have a solid basis for the exposure, and understand the tracking error the position introduces to the portfolio.

# Domestic equity

The U.S. economic environment has shifted in a materially more positive direction, post-election, as reflected by rising in equity prices. We are relatively bullish on U.S. earnings growth in the near term but remain concerned that investors are paying for this excess growth upfront through higher valuations. We maintain a neutral weight to U.S. equities.

Higher equity prices and earnings expectations have been influenced by corporate tax cuts and deregulation

proposed by the new administration. There have been no further details released on timing of tax cuts, and lofty expectations may leave room for disappointment.

According to FactSet, Q1 2017 S&P 500 earnings are expected to grow 9.2% YoY. The estimate was revised downward from 12.5% on December 31<sup>st</sup> due to negative EPS guidance in the Materials and Consumer Discretionary sectors.

Investors may be paying for higher earnings growth through elevated valuations

# Equity market corrections

With above average U.S. equity valuations and a bull market that has lasted nearly nine years, there has been speculation that a market correction is approaching. While we remain concerned about valuations we do not believe that equities are necessarily in the final stages of the cycle, nor that market corrections are predictable. It is important to remember that equity drawdowns are normal, and should be viewed in the proper context.

The chart below shows the cumulative price movement of the S&P 500 during equity market corrections of at least 10%, starting from 18 months prior to the drawdown. In many instances, late cycle equity gains were enough to offset the entire drawdown, outside of major financial collapses. Market timing can be especially dangerous in these instances if an investor gets out of the market too early.

Equity market corrections are normal and should be viewed in the proper context

Source: Bloomberg

# Domestic equity size and style

Growth equities outperformed value equities during the quarter. The Russell 1000 Growth Index and Russell 1000 Value Index returned 8.9% and 3.3%, respectively. Financial sector performance had a significant effect on the value premium, affected by uncertainty around the direction of interest rates and deregulation proposals.

U.S. large cap equities outperformed small cap during the quarter, though small caps have delivered strong

year-over-year outperformance. Small cap equity valuations remain considerably elevated relative to large cap equities which will likely act as a headwind to future performance. However, if President Trump's deregulation proposals are seen through, this should benefit smaller American companies. Further U.S. dollar appreciation would also benefit smaller companies on a relative basis due to less international currency exposure.

**VALUE VS GROWTH (YOY)**

Source: Russell Investments, as of 3/31/17

**U.S. LARGE VS. SMALL RELATIVE PERFORMANCE**

Source: Morningstar, as of 3/31/17

# International equity

International equity markets outperformed domestic equities over the quarter. The MSCI ACWI ex U.S. returned 7.9% on an unhedged basis while the S&P 500 returned 6.1%.

International and emerging markets continue to trade at lower valuation levels than domestic markets, based on a variety of metrics. Despite our positive outlook for earnings growth in the U.S., the upside for domestic equities appears limited due to the optimism already baked into the price. International markets likely possess greater upside potential through either valuation

expansion or earnings growth surprise, simply due to current valuation levels. However, tail risks are also apparent in these markets. We believe a neutral weight is appropriate.

The U.S. dollar fell 3.6% in Q1 on a trade-weighted basis, and continued to contribute volatility to portfolios with unhedged currency exposure. Emerging market currencies exhibited further recovery during the quarter (MSCI EM 11.4% unhedged return vs. 7.3% hedged return) while the yen appreciated (4.3% NIKKEI 225 unhedged return vs. 0.1% hedged).

## GLOBAL EQUITY PERFORMANCE

Source: Bloomberg, as of 3/31/17

## VALUATIONS

Source: Bloomberg, MSCI, as of 3/31/17 - 3 month average

## EFFECT OF CURRENCY (1 YEAR ROLLING)

Source: MSCI, as of 3/31/17

# Emerging market equity

Emerging market equities extended their positive run in the first quarter, as the unhedged MSCI Emerging Markets index returned 11.4% (7.3% hedged). Performance was bolstered by strong global growth and stable commodity prices which have correlated highly with emerging market equities in the past. Steady demand from developed markets encouraged manufacturing in emerging economies as seen by increases in aggregate purchasing managers' indices (PMI).

Valuations increased moderately over the past three years but remain at attractive levels relative to EAFE and U.S. equities. Earnings growth estimates were highest in the Technology and Financial sectors, concentrated mainly in Korea and China.

Positive long-term growth expectations are not without potential disruptions. We remain particularly watchful of U.S. trade policies and upcoming elections in France, Germany, and Turkey.

Fundamentals  
are improving  
in emerging  
economies

12-MONTH ROLLING PERFORMANCE

Source: MPI, as of 3/31/17

COMMODITY PRICES & EM PERFORMANCE

Source: Bloomberg, as of 3/31/17

FORWARD P/E RATIOS

Source: Bloomberg as of 3/31/17

# Equity valuations

The outlook for corporate earnings growth improved in Q1 which contributed to mildly lower forward P/E multiples. Overall, valuations remain elevated, consistent with mid-to-later stages of the economic cycle and an environment of low interest rates and moderate inflation. As the global economy transitions towards higher rates and inflation, valuations may shift to a lower, more normal level.

The S&P 500 sits at a forward P/E of 18.3, above the 20-

year average of 16.9, but within a single standard deviation of the average. The valuation of domestic equities is richer than international equities and emerging markets, as measured by trailing P/E and price-to-free cash flow ratios.

Further positive earnings and earnings expectations surprises would of course bode well for valuation levels as investors are properly compensated for above-average equity prices.

Valuations are above average, but not unusual

# Equity volatility

Equity volatility was considerably low in the first quarter. Realized volatility of the S&P 500 was 6.7%, the lowest mark since the beginning of this business cycle. Implied volatility, as indicated by the VIX, is also below average, despite greater political uncertainty. However, it is important to remember that volatility can return quickly. Other measures of equity risk, such as option skews, show that investors are paying a premium for large downside risk protection. Traditional measures of

volatility may be understating equity market risk.

International and emerging equities followed in a similar trend with below average realized volatility. Currency continued to play an important role in unhedged international equity exposure. Over the last ten years, unhedged currency exposure increased the annualized standard deviation of the MSCI EAFE and EM indices by 4% and 6%, respectively.

Equity volatility is low, but can return quickly

# Long-term equity performance

Source: MPI, as of 3/31/17

# Other assets

# Commodities

Commodity performance has been lackluster over the past decade, delivering negative returns through the global financial crisis and the recent oil crisis. Much of this performance has been caused not by price movement, but by the shape of commodity futures curves. An upward sloping curve creates a drag for investors as a higher price is paid to enter each futures contract, and a downward sloping curve creates positive carry for investors as prices paid for futures contracts are lower. This premium/discount is a major determinant of commodity performance, and is known as “roll yield”. Roll yield can be negatively affected by

commodity crises as current contract prices drop further than distant prices and the curve becomes steeper.

As commodity prices moderate, futures curves have flattened and negative roll yield has begun to dissipate. Oil in particular significantly impacts overall roll yield due to its larger weight in commodities indices. Oil has exhibited a flatter curve shape recently. We are continuing to monitor these effects since a neutral or positive roll return would help to materially improve commodity returns.

The drag from negative roll yield is abating, improving the outlook for commodities performance

## ROLL RETURN

Source: Standard & Poor's, Goldman Sachs, as of 3/31/17

## CURVE SHAPE

Source: Bloomberg, as of 4/12/17

# Currency

In the first quarter, the U.S. dollar reversed part of its gains following the presidential election in November. On a trade weighted basis, the dollar was down 3.6% against a basket of major currencies. Currency movement has been an important influence in unhedged foreign asset exposure. Over the past year, U.S. dollar strength has eroded positive equity returns in developed markets, while dollar weakness against emerging markets has added to returns.

Emerging market currencies rallied in the first quarter following a sharp decline to end last year. The JPM Emerging Market Currency Index was up 2.5%.

While long-term movements in the U.S. are often driven by broad mean reversion to fair value based on purchasing power parity, shorter term moves are still likely to be heavily influenced by developments in foreign trade policy, where much uncertainty remains.

# Definitions

**Bloomberg US Weekly Consumer Comfort Index** - tracks the public's economic attitudes each week, providing a high-frequency read on consumer sentiment. The index, based on cell and landline telephone interviews with a random, representative national sample of U.S. adults, tracks Americans' ratings of the national economy, their personal finances and the buying climate on a weekly basis, with views of the economy's direction measured separately each month. ([www.lanqerresearch.com](http://www.lanqerresearch.com))

**University of Michigan Consumer Sentiment Index** - A survey of consumer attitudes concerning both the present situation as well as expectations regarding economic conditions conducted by the University of Michigan. For the preliminary release approximately three hundred consumers are surveyed while five hundred are interviewed for the final figure. The level of consumer sentiment is related to the strength of consumer spending. ([www.Bloomberg.com](http://www.Bloomberg.com))

**Citi Economic Surprise Index** - objective and quantitative measures of economic news. Defined as weighted historical standard deviations of data surprises (actual releases vs Bloomberg survey median). A positive reading of the Economic Surprise Index suggests that economic releases have on balance been beating consensus. The indices are calculated daily in a rolling three-month window. The weights of economic indicators are derived from relative high-frequency spot FX impacts of 1 standard deviation data surprises. The indices also employ a time decay function to replicate the limited memory of markets. ([www.Bloomberg.com](http://www.Bloomberg.com))

**Merrill Lynch Option Volatility Estimate (MOVE) Index** – a yield curve weighted index comprised of a weighted set of 1-month Treasury options, including 2.5.10 and 30 year tenor contracts. This index is an indicator of the expected (implied) future volatility in the rate markets. ([www.Bloomberg.com](http://www.Bloomberg.com))

**OECD Consumer Confidence Index** - based on households' plans for major purchases and their economic situation, both currently and their expectations for the immediate future. Opinions compared to a "normal" state are collected and the difference between positive and negative answers provides a qualitative index on economic conditions. (<https://data.oecd.org/>)

**OECD Business Confidence Index** - based on enterprises' assessment of production, orders and stocks, as well as its current position and expectations for the immediate future. Opinions compared to a "normal" state are collected and the difference between positive and negative answers provides a qualitative index on economic conditions. (<https://data.oecd.org/>)

**NFIB Small Business Outlook** - Small Business Economic Trends (SBET) is a monthly assessment of the U.S. small-business economy and its near-term prospects. Its data are collected through mail surveys to random samples of the National Federal of Independent Business (NFIB) membership. The survey contains three broad question types: recent performance, near-term forecasts, and demographics. The topics addressed include: outlook, sales, earnings, employment, employee compensation, investment, inventories, credit conditions, and single most important problem. (<http://www.nfib-sbet.org/about/>)

<sup>1</sup>(DPI) is equal to (capital returned / capital called)

<sup>2</sup>(TVPI) is equal to (market value + capital returned) / capital called

<sup>3</sup>Last known market value + capital calls - distributions

<sup>4</sup>IRR currently unavailable for these funds.

<sup>5</sup>Investment period ended, no further capital to be called.

<sup>6</sup>Net IRR is calculated on the cash flows of all the limited partners of the fund and is net of all fees. Each IRR figure is provided by its respective manager.

<sup>7</sup>BlackRock: Total capital called is \$15,310,682 which includes recycled distributions.

<sup>8</sup>StepStone: \$7,223,499 in recallable distributions

UBP liquidated 12/31/2015. Titan Advisors funded 2/1/2016.

**Performance Return Calculations**

Performance is calculated using a Modified Dietz and for time periods with large cash flow (generally greater than 10% of portfolio value), Time Weighted Rates of Return (TWRR) methodologies. Monthly returns are linked geometrically and annualized for periods longer than one year.

**Data Source**

Verus is an independent third party consulting firm and calculates returns from best source book of record data. Returns calculated by Verus may deviate from those shown by the manager in part, but not limited to, differences in prices and market values reported by the custodian and manager, as well as significant cash flows into or out of an account. It is the responsibility of the manager and custodian to provide insight into the pricing methodologies and any difference in valuation.

**Illiquid Alternatives**

Due to the inability to receive final valuation prior to report production, closed end funds (including but are not limited to Real Estate, Hedge Funds, Private Equity, and Private Credit) performance is typically reported at a one-quarter lag. Valuation is reported at a one-quarter lag, adjusted for current quarter flow (cash flows are captured real time). Closed end fund performance is calculated using a time-weighted return methodology consistent with all portfolio and total fund performance calculations. For Private Markets, performance reports also include Verus-calculated multiples based on flows and valuations (e.g. DPI and TVPI) and manager-provided IRRs.

**Other Disclosures**

# Glossary

---

**Allocation Effect:** An attribution effect that describes the amount attributable to the managers' asset allocation decisions, relative to the benchmark.

**Alpha:** The excess return of a portfolio after adjusting for market risk. This excess return is attributable to the selection skill of the portfolio manager. Alpha is calculated as:  $\text{Portfolio Return} - [\text{Risk-free Rate} + \text{Portfolio Beta} \times (\text{Market Return} - \text{Risk-free Rate})]$ .

**Benchmark R-squared:** Measures how well the Benchmark return series fits the manager's return series. The higher the Benchmark R-squared, the more appropriate the benchmark is for the manager.

**Beta:** A measure of systematic, or market risk; the part of risk in a portfolio or security that is attributable to general market movements. Beta is calculated by dividing the covariance of a security by the variance of the market.

**Book-to-Market:** The ratio of book value per share to market price per share. Growth managers typically have low book-to-market ratios while value managers typically have high book-to-market ratios.

**Capture Ratio:** A statistical measure of an investment manager's overall performance in up or down markets. The capture ratio is used to evaluate how well an investment manager performed relative to an index during periods when that index has risen (up market) or fallen (down market). The capture ratio is calculated by dividing the manager's returns by the returns of the index during the up/down market, and multiplying that factor by 100.

**Correlation:** A measure of the relative movement of returns of one security or asset class relative to another over time. A correlation of 1 means the returns of two securities move in lock step, a correlation of -1 means the returns of two securities move in the exact opposite direction over time. Correlation is used as a measure to help maximize the benefits of diversification when constructing an investment portfolio.

**Excess Return:** A measure of the difference in appreciation or depreciation in the price of an investment compared to its benchmark, over a given time period. This is usually expressed as a percentage and may be annualized over a number of years or represent a single period.

**Information Ratio:** A measure of a manager's ability to earn excess return without incurring additional risk. Information ratio is calculated as: excess return divided by tracking error.

**Interaction Effect:** An attribution effect that describes the portion of active management that is contributable to the cross interaction between the allocation and selection effect. This can also be explained as an effect that cannot be easily traced to a source.

**Portfolio Turnover:** The percentage of a portfolio that is sold and replaced (turned over) during a given time period. Low portfolio turnover is indicative of a buy and hold strategy while high portfolio turnover implies a more active form of management.

**Price-to-Earnings Ratio (P/E):** Also called the earnings multiplier, it is calculated by dividing the price of a company's stock into earnings per share. Growth managers typically hold stocks with high price-to-earnings ratios whereas value managers hold stocks with low price-to-earnings ratios.

**R-Squared:** Also called the coefficient of determination, it measures the amount of variation in one variable explained by variations in another, i.e., the goodness of fit to a benchmark. In the case of investments, the term is used to explain the amount of variation in a security or portfolio explained by movements in the market or the portfolio's benchmark.

**Selection Effect:** An attribution effect that describes the amount attributable to the managers' stock selection decisions, relative to the benchmark.

**Sharpe Ratio:** A measure of portfolio efficiency. The Sharpe Ratio indicates excess portfolio return for each unit of risk associated with achieving the excess return. The higher the Sharpe Ratio, the more efficient the portfolio. Sharpe ratio is calculated as:  $\text{Portfolio Excess Return} / \text{Portfolio Standard Deviation}$ .

**Sortino Ratio:** Measures the risk-adjusted return of an investment, portfolio, or strategy. It is a modification of the Sharpe Ratio, but penalizes only those returns falling below a specified benchmark. The Sortino Ratio uses downside deviation in the denominator rather than standard deviation, like the Sharpe Ratio.

**Standard Deviation:** A measure of volatility, or risk, inherent in a security or portfolio. The standard deviation of a series is a measure of the extent to which observations in the series differ from the arithmetic mean of the series. For example, if a security has an average annual rate of return of 10% and a standard deviation of 5%, then two-thirds of the time, one would expect to receive an annual rate of return between 5% and 15%.

**Style Analysis:** A return based analysis designed to identify combinations of passive investments to closely replicate the performance of funds

**Style Map:** A specialized form or scatter plot chart typically used to show where a Manager lies in relation to a set of style indices on a two-dimensional plane. This is simply a way of viewing the asset loadings in a different context. The coordinates are calculated by rescaling the asset loadings to range from -1 to 1 on each axis and are dependent on the Style Indices comprising the Map.

This report contains confidential and proprietary information and is subject to the terms and conditions of the Consulting Agreement. It is being provided for use solely by the customer. The report may not be sold or otherwise provided, in whole or in part, to any other person or entity without written permission from Verus Advisory, Inc., (hereinafter Verus) or as required by law or any regulatory authority. The information presented does not constitute a recommendation by Verus and cannot be used for advertising or sales promotion purposes. This does not constitute an offer or a solicitation of an offer to buy or sell securities, commodities or any other financial instruments or products.

The information presented has been prepared using data from third party sources that Verus believes to be reliable. While Verus exercised reasonable professional care in preparing the report, it cannot guarantee the accuracy of the information provided by third party sources. Therefore, Verus makes no representations or warranties as to the accuracy of the information presented. Verus takes no responsibility or liability (including damages) for any error, omission, or inaccuracy in the data supplied by any third party. Nothing contained herein is, or should be relied on as a promise, representation, or guarantee as to future performance or a particular outcome. Even with portfolio diversification, asset allocation, and a long-term approach, investing involves risk of loss that the investor should be prepared to bear.

The information presented may be deemed to contain forward-looking information. Examples of forward looking information include, but are not limited to, (a) projections of or statements regarding return on investment, future earnings, interest income, other income, growth prospects, capital structure and other financial terms, (b) statements of plans or objectives of management, (c) statements of future economic performance, and (d) statements of assumptions, such as economic conditions underlying other statements. Such forward-looking information can be identified by the use of forward looking terminology such as believes, expects, may, will, should, anticipates, or the negative of any of the foregoing or other variations thereon comparable terminology, or by discussion of strategy. No assurance can be given that the future results described by the forward-looking information will be achieved. Such statements are subject to risks, uncertainties, and other factors which could cause the actual results to differ materially from future results expressed or implied by such forward looking information. The findings, rankings, and opinions expressed herein are the intellectual property of Verus and are subject to change without notice. The information presented does not claim to be all-inclusive, nor does it contain all information that clients may desire for their purposes. The information presented should be read in conjunction with any other material provided by Verus, investment managers, and custodians.

Verus will make every reasonable effort to obtain and include accurate market values. However, if managers or custodians are unable to provide the reporting period's market values prior to the report issuance, Verus may use the last reported market value or make estimates based on the manager's stated or estimated returns and other information available at the time. These estimates may differ materially from the actual value. Hedge fund market values presented in this report are provided by the fund manager or custodian. Market values presented for private equity investments reflect the last reported NAV by the custodian or manager net of capital calls and distributions as of the end of the reporting period. These values are estimates and may differ materially from the investments actual value. Private equity managers report performance using an internal rate of return (IRR), which differs from the time-weighted rate of return (TWRR) calculation done by Verus. It is inappropriate to compare IRR and TWRR to each other. IRR figures reported in the illiquid alternative pages are provided by the respective managers, and Verus has not made any attempts to verify these returns. Until a partnership is liquidated (typically over 10-12 years), the IRR is only an interim estimated return. The actual IRR performance of any LP is not known until the final liquidation.

Verus receives universe data from InvestorForce, eVestment Alliance, and Morningstar. We believe this data to be robust and appropriate for peer comparison. Nevertheless, these universes may not be comprehensive of all peer investors/managers but rather of the investors/managers that comprise that database. The resulting universe composition is not static and will change over time. Returns are annualized when they cover more than one year. Investment managers may revise their data after report distribution. Verus will make the appropriate correction to the client account but may or may not disclose the change to the client based on the materiality of the change.
